Developer Community

- ~ 50,000 registered iOS Developers [1]
- 500,000 applications [2]
- Objective-C is the 10th most popular language on GitHub
- Thousands of third party libraries on GitHub
- Of those 400+ appear to be well maintained and popular*

[1] <http://www.quora.com/iOS-Development/How-many-registered-iPhone-app-developers-are-there-and-is-there-a-directory-somewhere>

[2] [http://en.wikipedia.org/wiki/App_Store_\(iOS\)](http://en.wikipedia.org/wiki/App_Store_(iOS))

* An assumption based on any third party library that has 100+ watchers

How it has impacted Apple

- More developers means more competition, innovation, and *bitching*
- iOS has had 5 major releases in 5 years
- These releases were non-trivial for developers.
- It's a copy-cat-world and Apple is no exception

iOS 5

- iCloud
 - Backup
 - Storage
- ARC (Automatic Reference Counting)
- Storyboard
- Core Image
- GLKit
- Twitter

Third Party Libraries

Third Party Libraries

- Tons of them
 - <https://github.com/languages/Objective-C>
 - <http://cocoaobjects.com/>
 - <http://cocoacontrols.com/>
 - <http://www.mikeash.com/pyblog/>

Third Party Libraries

- Tons of them
 - <https://github.com/languages/Objective-C>
 - <http://cocoaobjects.com/>
 - <http://cocoacontrols.com/>
 - <http://www.mikeash.com/pyblog/>
- Ergo there is a lot of garbage as well

Third Party Libraries

- Tons of them
 - <https://github.com/languages/Objective-C>
 - <http://cocoaobjects.com/>
 - <http://cocoacontrols.com/>
 - <http://www.mikeash.com/pyblog/>
- Ergo there is a lot of garbage as well
- Focus on the ones that are maintained

Popular Libraries

- Three20
- ASIHttpRequest
- JSONKit
- ShareKit
- EGOTableViewPullRefresh
- MBProgressHUD
- AQGridView
- Tapku
- Cocos2D
- InAppKitSettings
- UIKit-Artwork Extractor
- Mogenerator
- PStackedView
- BCTabBarController
- EGOImageView
- IPOfflineQueue

Libraries I've Used

- Kiwi
- LRResty
- ASIHTTPRequest
- Three20
- InAppSettingsKit
- MAZeroingWeakRef
- MKInfoPanel
- JSONKit
- MAObjCRuntime
- CocoaPods

Libraries I've Used

- Kiwi
- LRResty
- ASIHTTPRequest
- Three20
- InAppSettingsKit
- MAZeroingWeakRef
- MKInfoPanel
- JSONKit
- MAObjCRuntime
- CocoaPods

Objection

Libraries I've Used

- Kiwi
- LRResty
- ASIHTTPRequest
- Three20
- InAppSettingsKit
- MAZeroingWeakRef
- MKInfoPanel
- JSONKit
- MAObjCRuntime
- CocoaPods

Objection

<http://www.objection-framework.org>

iOS Basics

- Objective-C
 - Superset of C
 - Dynamically typed
 - Dynamic dispatch (Runtime message passing)
 - Powerful Runtime

iOS Basics

- Objective-C
 - Superset of C
 - Dynamically typed
 - Dynamic dispatch (Runtime message passing)
 - Powerful Runtime
 - Odd syntax

iOS Basics

- Objective-C
 - Superset of C
 - Dynamically typed
 - Dynamic dispatch (Runtime message passing)
 - Powerful Runtime
 - Odd syntax
 - Get over it

How an app starts

How an app starts

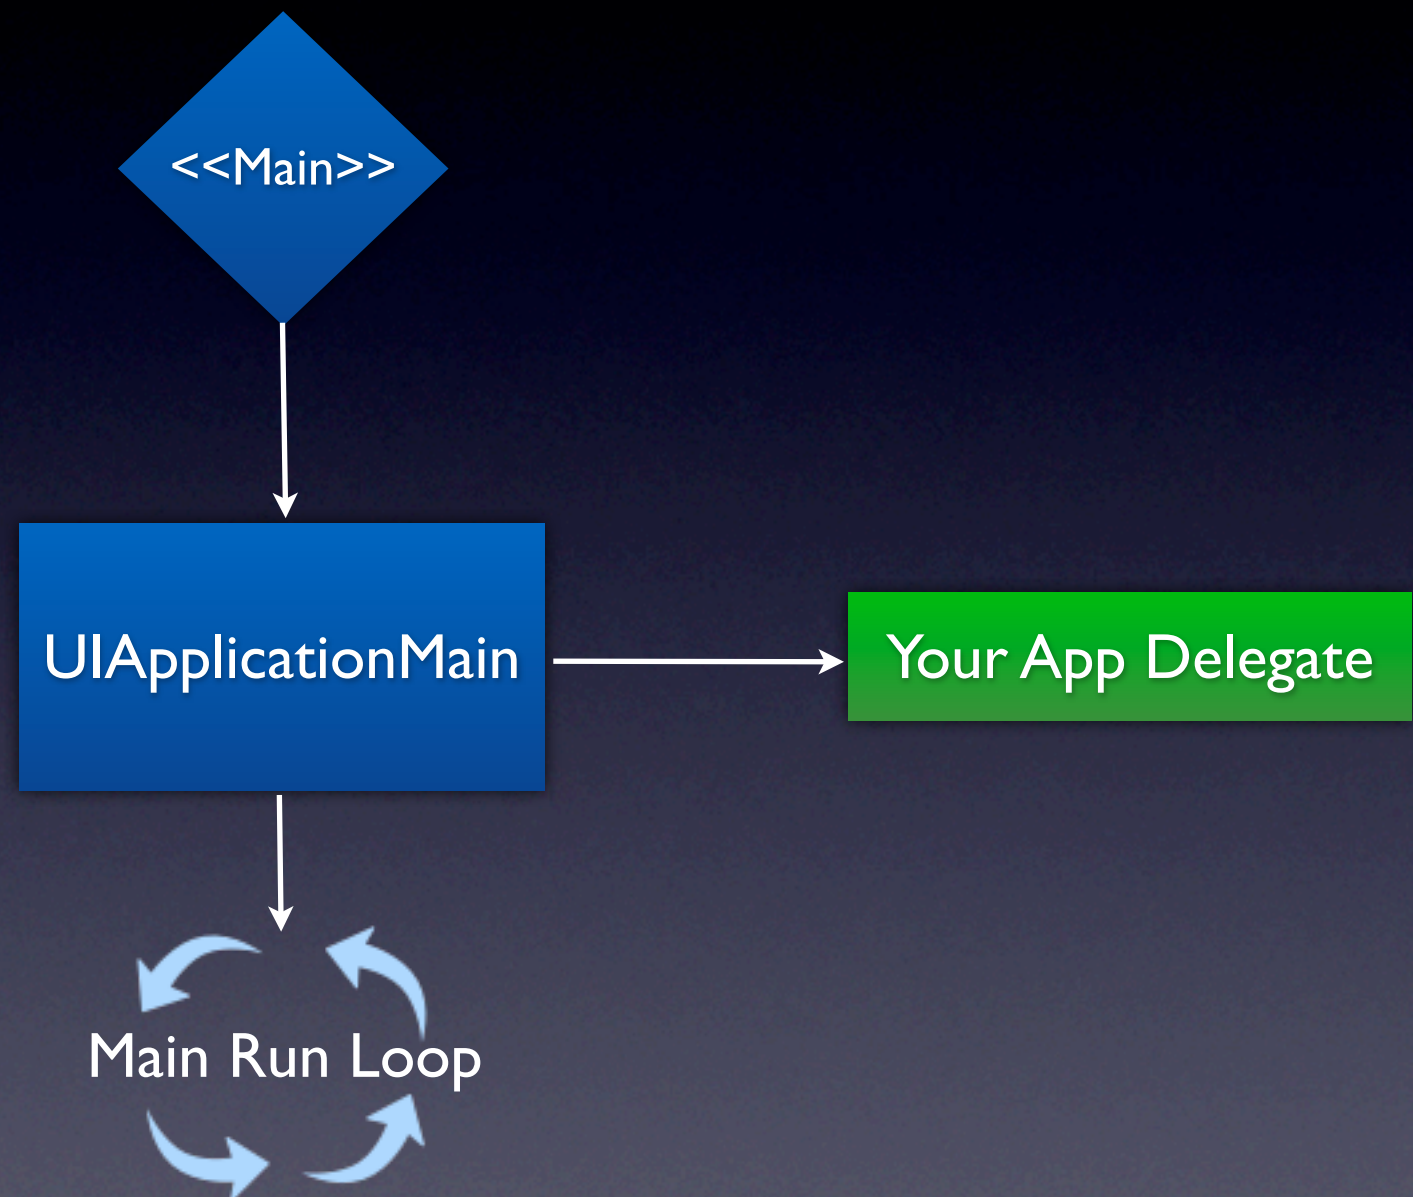

How an app starts

How an app starts

How an app starts

Example

- ARC
- iCloud
- Core Image
- GCD
- Some third party libraries

ARC

ARC

- Automatic Reference Counting

ARC

- Automatic Reference Counting
- Not Garbage Collection

ARC

- Automatic Reference Counting
- Not Garbage Collection
- Static Analysis (Compile Time)

ARC

- Automatic Reference Counting
- Not Garbage Collection
- Static Analysis (Compile Time)
- Think in terms of an object graph

ARC

- Automatic Reference Counting
- Not Garbage Collection
- Static Analysis (Compile Time)
- Think in terms of an object graph
 - `@property(nonatomic, strong)` instead of

ARC

- Automatic Reference Counting
- Not Garbage Collection
- Static Analysis (Compile Time)
- Think in terms of an object graph
 - `@property(nonatomic, strong)` instead of
 - `@property(nonatomic, retain)`

ARC

- Automatic Reference Counting
- Not Garbage Collection
- Static Analysis (Compile Time)
- Think in terms of an object graph
 - `@property(nonatomic, strong)` instead of
 - `@property(nonatomic, retain)`
 - `@property(nonatomic, weak)` instead of

ARC

- Automatic Reference Counting
- Not Garbage Collection
- Static Analysis (Compile Time)
- Think in terms of an object graph
 - `@property(nonatomic, strong)` instead of
 - `@property(nonatomic, retain)`
 - `@property(nonatomic, weak)` instead of
 - `@property(nonatomic, assign)`

ARC Continued

ARC Continued

- Going from C to Objective-C is a little trickier

ARC Continued

- Going from C to Objective-C is a little trickier
- `id obj = (id)CFGetSomething(...)` - Non-ARC

ARC Continued

- Going from C to Objective-C is a little trickier
- `id obj = (id)CFGetSomething(...)` - Non-ARC
- `id obj = (__bridged id)CFGetSomething(...)` - ARC

ARC Continued

- Going from C to Objective-C is a little trickier
- `id obj = (id)CFGetSomething(...)` - Non-ARC
- `id obj = (__bridged id)CFGetSomething(...)` - ARC
- But...copying...is different

ARC Continued

- Going from C to Objective-C is a little trickier
- `id obj = (id)CFGetSomething(...)` - Non-ARC
- `id obj = (__bridged id)CFGetSomething(...)` - ARC
- But...copying...is different
- `id obj = (__bridged_transfer id)CFCopyValue(...)`

ARC Continued

- Going from C to Objective-C is a little trickier
- `id obj = (id)CFGetSomething(...)` - Non-ARC
- `id obj = (__bridged id)CFGetSomething(...)` - ARC
- But...copying...is different
- `id obj = (__bridged_transfer id)CFCopyValue(...)`
 - Transfers ownership by balancing copy with release

ARC Continued

- Going from C to Objective-C is a little trickier
- `id obj = (id)CFGetSomething(...)` - Non-ARC
- `id obj = (__bridged id)CFGetSomething(...)` - ARC
- But...copying...is different
- `id obj = (__bridged_transfer id)CFCopyValue(...)`
 - Transfers ownership by balancing copy with release
 - Otherwise CF object would leak

iCloud

iCloud

- Saves documents/preferences to a user's cloud account

iCloud

- Saves documents/preferences to a user's cloud account
- Those documents/preferences are shared between different instances of the app under the same account

iCloud

- Saves documents/preferences to a user's cloud account
- Those documents/preferences are shared between different instances of the app under the same account
- Magic, Right?

Preflight Tasks

Preflight Tasks

- Enable entitlements in project

Preflight Tasks

- Enable entitlements in project
- Define key/value and containers

Preflight Tasks

- Enable entitlements in project
- Define key/value and containers
 - `com.companyname.AContainer`

Preflight Tasks

- Enable entitlements in project
- Define key/value and containers
 - `com.companyname.AContainer`
- Create mobile provisioning profile with iCloud enabled

Preflight Tasks

- Enable entitlements in project
- Define key/value and containers
 - `com.companyname.AContainer`
- Create mobile provisioning profile with iCloud enabled
- Add document types

Preflight Tasks

- Enable entitlements in project
- Define key/value and containers
 - `com.companyname.AContainer`
- Create mobile provisioning profile with iCloud enabled
- Add document types
- And now you can work on actual software

Document Storage

Document Storage

- Get app sandbox Documents directory and iCloud directory

Document Storage

- Get app sandbox Documents directory and iCloud directory
- UIDocument + NSFileWrapper FTW

Document Storage

- Get app sandbox Documents directory and iCloud directory
- UIDocument + NSFileWrapper FTW
 - Implement serialization

Document Storage

- Get app sandbox Documents directory and iCloud directory
- UIDocument + NSFileWrapper FTW
 - Implement serialization
 - Implement deserialization

Document Storage

- Get app sandbox Documents directory and iCloud directory
- UIDocument + NSFileWrapper FTW
 - Implement serialization
 - Implement deserialization
 - Wrap directories/files using NSFileWrapper

Document Storage

- Get app sandbox Documents directory and iCloud directory
- UIDocument + NSFileWrapper FTW
 - Implement serialization
 - Implement deserialization
 - Wrap directories/files using NSFileWrapper
- Save to app sandbox and then move to iCloud

Core Image

- Provides better mechanisms for image manipulation/filters
- Introduces concept of 'detector types' to allow for object detection in an image
 - Such as faces
- Near real-time processing of video

GCD, Briefly

GCD, Briefly

- Grand Central Dispatch

GCD, Briefly

- Grand Central Dispatch
- Built to improve and support concurrent code execution using blocks
- Intelligently manages thread pools by considering CPU constraints

GCD, Briefly

- Grand Central Dispatch
- Built to improve and support concurrent code execution using blocks
 - Intelligently manages thread pools by considering CPU constraints
- `dispatch_async(queue, ^{ ...code... })`
 - Global queues (priority based)
 - Main Queue (Main Run Loop)
 - Custom serial and concurrent queues
